

Jinhe (Jin) Tang

jin.tang25@imperial.ac.uk | (+44) 7742976568 | linkedin.com/jinhe-tang

PROFILE

Self-motivated fast learner with experience in AI research and building data pipeline through big tech internships. Solid foundation in machine learning with the ability to explain technical concepts in simple terms. Strong interest in the intersection of AI and creator ecosystems. Course ended and available from **Mid June** and onward.

EDUCATION

Imperial College London *Sept 2025 – Sept 2026 (Expected)*

MSc Data Science and Machine Learning | Distinction (Predicted)

Beijing University of Posts and Telecommunications *Sept 2021 – Jun 2025*

BEng Artificial Intelligence | GPA: 89.4/100, Top 5%

PROFESSIONAL EXPERIENCE

ByteDance Ltd. — Software Research Intern, TRAE Team *Beijing | Jan – Jul 2024*

- Developed and maintained LLM-powered code evaluation framework across diverse scenarios
- Constructed evaluation set from real-world repositories to improve practicality of code generation
- Automated repository collection, Docker-based environment setup, and unit test generation pipelines
- Collaborated to analyze model performance and improve evaluation reliability for real-world usage

Intel Corp. — AI Framework Intern *Shanghai | Aug – Dec 2024*

- Maintained LLM inference framework IPEX-LLM, ensuring LLM functionality after model quantization
- Performed benchmark testing and latency analysis for llama.cpp and Ollama inference frameworks
- Provided troubleshooting and deployment support for users running local LLM systems on Intel hardware

PUBLICATION

RepoMasterEval: Evaluating Code Completion via Real-World Repositories

Q. Wu, C. Peng, P. Gao, R. Hu, H. Gan, B. Jiang, **Jinhe Tang**, Z. Deng et al.

IEEE/ACM International Conference on Automated Software Engineering (ASE), Nov 2025

SELECTED PROJECTS

IDC Time Series Anomaly Detection — China Telecom *Feb – Apr 2024*

Undergraduate Researcher

- Predicted traffic anomalies from network port time series data using LSTM-based autoencoder architecture
- Improved anomaly detection recall rate by over 30% through feature engineering and model optimization
- Applied SVM classifier to categorize anomaly severity levels for downstream monitoring analysis
- Deployed model as a Flask REST API supporting real-time inference with FIFO queue-based streaming

Multi-Source Climate & Migration Data Pipeline with LLM-based Prediction *May 2026*

Coursework Group Project - Team Lead

- Conducted EDA and feature correlation on earth surface temperature anomalies with bird migration timing
- Engineered migration timing metrics from eBird raw frequency distributions and built a multi-source data pipeline fusing UK and South Africa climate features
- Developed a temperature prediction model using LLM backbone, applying cross-attention between time series patches and token embeddings to align climate features with the model's temporal pattern recognition capacity

TECHNICAL SKILLS

- **Programming:** proficient in Python, PyTorch, scikit-learn, experienced in LLM and recommendation system
- **Backend & Deployment:** FastAPI, Flask, REST APIs, Docker, Linux, Git
- **Data Science:** EDA, feature engineering, experiment design, data preprocessing, model evaluation
