PROFILE

Graduate student in Data Science with internship experience in data science, LLM evaluation, and large-scale data processing at ByteDance and Intel. Skilled in Python, SQL and statistical analysis. Self-motivated fast learner with strong communication skills and ability to convey technical concepts in simple terms.

EDUCATION

Imperial College London *Sept 2025 – 30th.Sept 2026 (Expected)*

MSc Data Science and Machine Learning | Distinction (Predicted)

Beijing University of Posts and Telecommunications *Sept 2021 – Jun 2025*

BEng Artificial Intelligence | GPA: 89.4/100, Top 5%

PROFESSIONAL EXPERIENCE

Puraffinity — Data Scientist Intern *London | May 2026 - Present*

- Conducted EDA on material properties, identifying top correlated features with removal performance
- Benchmarked Ridge Regression, Random Forest, and XGBoost with cross-validation, identifying best R^2
- Applied SHAP values for interpretable feature importance and Spearman correlation analysis to uncover structure-performance relationships under severe data sparsity
- Demonstrated strong communication skills by presenting weekly findings to non-tech background supervisors

University College London — Part-Time Research Assistant, Prof. He Ye *London | Oct 2025 – Feb 2026*

- Conducted issue engineering for coding agents on SWE-bench, benchmarked their impact on Pass@1
- Quantified formatting gains by comparing random vs. accumulative resolution rates, identifying run-to-run noise
- Traced agent reasoning instability across formats, measured by resolve/unresolve flips on identical issues

ByteDance Ltd. — Software Research Intern, TRAE Team *Beijing | Jan – Jul 2024*

- Developed LLM-based evaluation frameworks to analyze model performance across diverse coding scenarios
- Conducted large-scale repository data collection, preprocessing, and validation from open-source projects
- Automated repository collection and unit test generation pipelines using Github API and Docker
- Analyzed evaluation metrics and experimental results to support data-driven LLM post-training

Intel Corp. — AI Framework Intern *Shanghai | Aug – Dec 2024*

- Maintained LLM inference framework IPEX-LLM, ensuring LLM functionality after model quantization
- Conducted benchmark testing and performance analysis for llama.cpp and Ollama across diverse hardware
- Provided user support for LLM deployment on Intel hardware via issue reproduction and troubleshooting

SELECTED PROJECT

Sea Surface Temperature Prediction Integrating LLM and Spatiotemporal GNN *Jan - May 2025*

Undergraduate Final Year Project

- Built a spatiotemporal sea surface temperature forecasting pipeline using multi-decade climate observations
- Developed LLM backbone prediction model, aligning time patches and token embeddings using cross-attention
- Incorporated graph-based spatial feature extraction to capture geographical dependencies between regions

IDC Time Series Anomaly Detection — China Telecom *Feb – Apr 2024*

Undergraduate Researcher

- Predicted traffic anomalies from network port time series data using LSTM-based autoencoder architecture
- Improved anomaly detection recall rate by over 30% through feature engineering and model optimization
- Applied SVM classifier to categorize anomaly severity levels, producing structured outputs to support downstream monitoring and reporting
- Deployed model as a Flask REST API supporting real-time inference with FIFO queue-based streaming

PUBLICATION

RepoMasterEval: Evaluating Code Completion via Real-World Repositories

Q. Wu, C. Peng, P. Gao, R. Hu, H. Gan, B. Jiang, **Jinhe Tang**, Z. Deng et al.

IEEE/ACM International Conference on Automated Software Engineering (ASE), Nov 2025

TECHNICAL SKILLS

- **Programming:** Python (proficient), SQL, C++/C
- **Data Science:** Pandas, NumPy, Scikit-learn, statistical analysis, feature engineering, data preprocessing
- **Tools & Platforms:** Excel, Git, Docker, Linux/Unix, agentic workflow
- **Languages:** English (fluent, working proficiency), Chinese (native)
